

The Power of Point Of Sale

INTEGRATED SECURITY CAMERAS

Imagine a system where POS units could tell cameras to start recording, have every key stroke embedded into the recorded image and then have the POS unit tell the camera to stop recording. Add to this the ability to view an integrated camera from any Point of Sale screen in the venue and be able to replay recorded footage of any transaction from the POS Audit Trail on the back of house server.

Too good to be true? Well, H&L Australia and Mobotix have joined forces to deliver such a system.

This partnership has been driven by industry demand as POS, Staff and Customer surveillance becomes more important. Cameras that can record two images at and cameras with hemispheric lenses that can record everything in a 10 metre radius are being installed in hotels and taverns across Australia.

IP Megapixel Camera Technology, which allows images to be magnified many more times than standard CCTV footage, is the future today. When integrated into Point of Sale systems the possibilities are limitless.

Dual lens cameras can have one lens aimed at the POS unit and cash drawer, while the other lens is aimed at the spirit rail where staff are dispensing. With the transactions embedded on the recording, management have a clear view of what is dispensed, what is delivered and what has been processed at the POS unit. Alternatively one lens could be aimed at the counter to prevent situations where a customer purchases multiple items and returns later claiming they left an item behind.

The Back of House Audit Trail can be filtered to show sales, no sales, sales of a particular item, sales at a specified time and sales by a particular user. A simple right click on the transaction will then retrieve and play the recording.

TransID	Trans Type	# Items	Sale Total	Proc.	Device Time	Server Time	Docket Number	Station	Table Number	Table ID	Account	Member	Guest	User ID	Camera	Card Number	Drawer Number	Priority	Location	Training	Status

Right Click on transaction in Audit Trail to Play Camera Event

This Cutting Edge integration between IP Megapixel Camera Technology and Point of Sale solutions, offers Hoteliers a complete tool to monitor the security of their venue, staff and patrons without expensive DVR's or footage that is unrecognisable due to old CCTV technology - and it's as easy as pressing a button!

For an online demonstration go to <http://www.youtube.com/watch?v=B7arEvK77Kw>

- ### IN A NUTSHELL
- H&L Mobotix camera integration is a POS surveillance product aimed at providing a Hi-Resolution footage with keystroke overlay embedded in the footage.
 - Use of the dual lens (D12) camera provides footage over the Point of Sale unit as well as down the bar or across the counter. By viewing down the bar it can be seen clearly if a spirit was added to a post mix sale.
 - Camera footage is linked to transactions in Audit Trail so that search features in Audit Trail can be utilised to find users, no sales or specific PLU's. Right clicking on the transaction allows you play back the footage within Audit Trail.
 - Exceed now has live view buttons for the cameras. Giving Managers the ability to view a Mobotix camera in any location.
